

Rating spider mite infestation

Level 1: Plants green; Mites barely detected. Limited to edges or very dry areas

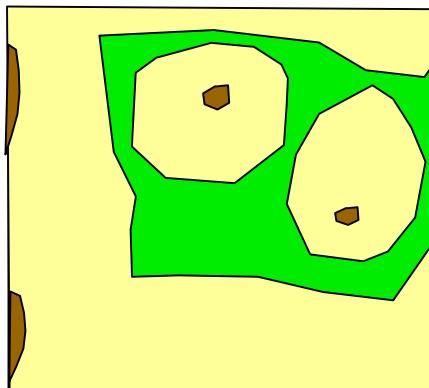

Level 2: Mites easily found, but only on edges or in dry areas. First sign of stippling injury.

Watch population, but do not treat.

Level 3: All plants infested to some degree. Stippling on all leaves. Lower leaves yellow, speckled. Severe damage on edges, dry areas

Rescue treatment is warranted, especially if population is still actively growing.

Level 4:

Heavy infestation
Leaves yellow, wilted, dropping.
Severe damage

Yield already lost, but a rescue treatment will save field.
