Action Plan

What do I do with these rankings?

Step 1. List the practices that were given a ranking of 1 (high risk of contaminating groundwater) in the table below.

Step 2. List (in the table below) the alternative practices, structures or equipment that will help to reduce the groundwater contamination risk for each practice with a high ranking. You may want to consult with your MSU County Extension office, Conservation District, NRCS office, or a local agribusiness for additional information.

Step 3. Enter a target date for accomplishing the changes. Small changes that are inexpensive and easy may be made immediately; changes that involve building structures or purchasing equipment may take more time. Your goal should be to reduce the risk of groundwater contamination as much as possible.

High-risk practice	Alternative practice	Date planned to implement practice

MICHIGAN STATE UNIVERSITY EXTENSION

MSU is an Affirmative-Action Equal-Opportunity Institution. Michigan State University Extension programs and materials are open to all without regard to race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, marital status, or family status. ■ Issued in furtherance of Extension work in agriculture and home economics, acts of May 8 and June 20, 1914, in cooperation with the U.S. Department of Agriculture. Margaret A. Bethel, acting Extension director, Michigan State University, E. Lansing, MI 48824. ■ This information is for educational purposes only. Reference to commercial products or trade names does not imply endorsement by MSU Extension or bias against those not mentioned. This bulletin becomes public property upon publication and may be printed verbatim with credit to MSU. Reprinting cannot be used to endorse or advertise a commercial product or company.
