Trichogramma wasp
Tricogrammatidae

**Adults:** Minute. Often yellow or yellow and black. Red eyes.

**Eggs:** Female deposits an egg inside the egg of the host insect.

**Larvae:** Hatch inside and feed on the host eggs.

**Pupae:** Pupation occurs within the parasitized egg. Adults emerge in 7-10 days. One or more individuals develop within the same host egg. Parasitized eggs are often black; a small hole in the host egg indicates the wasp emerged.

**Hosts:** Moth eggs, including corn earworm, European corn borer, diamondback moth, and tomato and tobacco hornworm.
