Tumble pigweed
*Amaranthus albus* L.

**Life cycle**
Bushy-branched summer annual.

**Leaves**
Alternate, oval- to spatula-shaped, light green leaves have wavy margins and notched leaf tips.

**Stems**
Mostly erect and usually hairless, pale green to whitish stems with multiple branches create a bushy appearance. Stems, up to 4 feet tall, break off at the soil surface when mature and tumble with the wind.
Tumble pigweed *continued*

**Flowers and fruit**
Small, greenish flowers are found in dense clusters in the leaf axils. Flowers have long bracts two to four times the length of the sepals and yield small, round, shiny black seeds.

**Reproduction**
Seeds.

Tumble pigweed leaf.

Whitish stems of tumble pigweed.
